

Setting up Q-Mgr for an electronics shop

A start-to-finish walkthrough — from creating your organization's account to getting a kiosk, counter, and waiting-area screen all talking to Q-Mgr on your shop floor.

 ~35–45 min first setup

 Industry: **Retail**

 Devices needed: **1–3**

 **14-day** free trial, no card required

01 Create your account

REQUIRED

Three short steps — your organization, your admin login, then confirm.

☐ Go to the registration page

Open [/register](#) on your Q-Mgr URL and select **Create Account**.

☐ Step 1 — Organization details

- **Organization Name** — your shop's legal or trading name (e.g. "Bright Spark Electronics").
- **Your URL (Subdomain)** — pick a short slug; this becomes your shop's unique Q-Mgr address. Availability is checked live as you type.
- **Industry Type** — choose **Retail**. This seeds the service types and defaults built for electronics/retail shops, so skip "Other" even if it's tempting.
- **Organization Phone** — optional, shown on customer-facing screens.

☐ Step 2 — Your admin account

First name, last name, the email you'll log in with, and a password. This becomes your shop's first administrator — the account that can add staff and configure everything else.

☐ Step 3 — Confirm and create

Review the summary, accept the Terms of Service and Privacy Policy, then select **Create Account**.

02 Verify your email & sign in

REQUIRED

☐ Check your inbox

A verification link is sent to the admin email you registered with. If it doesn't arrive within a few minutes, the confirmation screen has a **Resend Verification Email** button.

☐ Sign in

Go to `/login`, enter your email or username, then your password.

03 Set up your branch & branding

REQUIRED

Everything in Q-Mgr — counters, tickets, displays — belongs to a branch.
One shop location is one branch.

☐ Add your branch

`Administration > Branches` — add your shop's address and details. Running more than one location? Add each as its own branch here.

☐ Apply your branding

`Administration > Branding Settings` — upload your logo and set your brand color. This appears on the customer display, the kiosk, and printed tickets.

04 Add your staff

REQUIRED

☐ Create staff accounts

`Administration > Users & Roles` — add an account per team member who'll serve customers or manage the shop. Assign each one a role (e.g. Staff for counter service, Admin for full access).

05 Define your service desks

REQUIRED

A typical electronics shop runs more than one queue — decide what yours needs before setting up devices.

☐ Create service types

Administration > Service Types — these are the reasons a customer joins a queue. Common ones for an electronics shop:

- **Repairs & Tech Support** — drop-off, pickup, or diagnostics
- **Sales & Advice** — product questions, purchase assistance
- **Returns & Warranty**

☐ Create counters

Administration > Counters Setup — one counter per physical service point (e.g. "Repairs Desk", "Sales Counter 1"). Link each counter to the service type(s) it handles.

06 Connect your devices to Q-Mgr

REQUIRED

This is the actual "system talking to Q-Mgr" part — three roles, three screens. Each is just a web browser pointed at a Q-Mgr URL; no app install needed.

Self-Service Kiosk

A tablet or touchscreen customers use to take a ticket when they walk in.

`/queue/kiosk`

Counter Terminal

The screen each staff member uses to call the next customer and manage their queue.

`/queue/counter`

Customer Display

The waiting-area screen or TV showing "now serving" and estimated wait.

`/queue/display/{branch}`

Setup tip: open the relevant URL on each device's browser, sign in with a staff account where prompted, and pin the tab or set it as the browser's home page so it's ready every morning. Kiosk and display printer/output preferences live under **Administration > Printer Settings** and **Administration > Kiosk Settings**.

07 Optional: digital signage for promotions

OPTIONAL

Show product promos, offers, or announcements on the same waiting-area screen, between queue updates.

☐ **Upload content**

[Digital Signage > Media Library](#) — add images, videos, or promo graphics.

☐ **Build a playlist and schedule**

[Digital Signage > Playlists](#) to group content, then [Digital Signage > Schedules](#) to control when it plays.

☐ **Assign a display zone**

[Digital Signage > Display Zones](#) maps a playlist to a physical screen. For a screen dedicated entirely to signage (not the queue display), use [/display/signage/{branch}](#) instead of the queue display URL.

08 Optional: connect your own inventory/POS system

OPTIONAL — FOR SHOPS WITH AN EXISTING SYSTEM

If your shop already runs its own inventory or point-of-sale software, you can have it push information into Q-Mgr — for example, a low-stock alert shown automatically on your signage screen.

☐ Create an API client

`Administration > API Clients` — create a new client for your inventory system. Q-Mgr gives you a `client_id` and `client_secret` — store these securely; the secret is shown once.

☐ Grant only what it needs

Scope the client narrowly — for a signage feed, that's typically read/write access to content and settings, nothing more. Least privilege keeps a compromised integration from being able to do more than its actual job.

☐ Authenticate and call the API

Your system exchanges the client ID/secret for an access token, then calls Q-Mgr's REST API with it — full reference at `/api/docs` once signed in.

Real-world pattern: a small background service on your side polls your inventory for low-stock items on a timer, then updates Q-Mgr's display banner with a message like "3 items low in stock" — no manual re-typing, and it shows up on the same screen your customers are already watching.

09 Go-live checklist

Run through this on the shop floor before your first real customer.

- ☐ Branch address and branding look right on the customer display
- ☐ Every staff member who'll serve customers has their own login
- ☐ Service types match how your shop actually splits work (repairs vs. sales vs. returns)
- ☐ Each counter is linked to the right service type(s)
- ☐ Kiosk device is positioned at the entrance and prints tickets correctly
- ☐ Counter terminal successfully calls a test ticket end-to-end
- ☐ Waiting-area display shows the queue clearly from a customer's seat
- ☐ (If used) signage playlist plays and loops correctly
